

Better reliability with high-flying tech tools

We are exploring advanced technology, including small unmanned aircraft systems, robots and augmented reality to learn how these emerging technologies can help us monitor our system and serve you more efficiently.

We're always working to improve your service and that includes researching technology that can help identify, predict and prevent power issues before they become problems for you. It's all part of our ongoing commitment to building a stronger and smarter grid to deliver electricity your business can count on in good weather and bad.

IN JANUARY
FPL BUSINESS
RATES GOING
DOWN
2-6%

Your bill is going down again

While the cost of many everyday products and services continues to go up, the price you pay for electricity has come down. And, in January, it will be even lower. We recently filed to reduce rates again in 2016. A typical business customer will see savings in the range of about 2 to 6 percent, depending on rate class and type of service.

This decrease is another example of our ongoing strategy to make investments that are designed to continuously improve service and keep electricity affordable for our customers over the long term.

Energy Answers

Q Should we unplug our office computers at the end of each day?

— Ruth D. from South Miami

A Many technologies have advanced over the years. Take advantage of your computer's and monitor's sleep modes to save energy and money.
